

COMPANY NAME

Power + Energy Associates

Brief company overview

P+EA are consulting engineers having an extensive experience in the field of Thermal Power Generation Worldwide. We are specialists in Thermal Power Generation, including Steam and Gas Turbines. We have expertise in design, project feasibility, supervising performance testing, performance assessment, selection of steam and gas turbines, economic analysis, specification, technical studies and site investigations.

We undertake due diligence and site investigations of thermal power plants, steam and gas turbine installations. P+EA carry out thermodynamic cycle analysis, feasibility studies, advise on operation and maintenance, and technical investigations. Our work includes the selection and application of appropriate technologies for gas turbine plants, diesel, combined cycle, Cogeneration (Cogen) and combined heat and power (CHP).
